PROFESSIONAL SUMMARY

Product professional with 9+ years across banking, credit risk and portfolio management, now building AI products hands-on. Independently designed, built and shipped 3 LLM-based platforms end-to-end — owning problem discovery, MVP scoping, prompt design, backlog and iterative release. Experienced across the full product lifecycle: discovery, PRD writing, prioritisation, stakeholder alignment, launch and post-launch iteration.

SKILLS

Product Management: Product Discovery, PRD Writing, Roadmapping, MVP Scoping, Product Backlog Management, User Stories & Acceptance Criteria, Prioritisation (RICE, MoSCoW), OKRs & KPIs, A/B Testing, Go-to-Market, Product Analytics, Agile/Scrum, Product Owner, SDLC, Jira

AI / ML Product: Generative AI, Large Language Models (LLM), RAG, Prompt Engineering, Model Evaluation (Evals), AI-assisted document workflows, Human-in-the-loop design, AI product lifecycle

Domain: Corporate & SME Lending, Credit Risk, Portfolio Analytics, Pricing (FTP / NIM), Collections & NPA Resolution, Regulatory Compliance, Fintech

Technical: Python, SQL, Next.js, FastAPI, Supabase, API Integration, Power BI, Google Analytics, Mixpanel, GitHub, Vercel

PROFESSIONAL EXPERIENCE

Product Manager | Yes Bank Limited

Apr 2022 - Present

- Owned end-to-end delivery of corporate and SME lending propositions — from discovery and requirements through cross-functional coordination to launch and post-launch monitoring.
- Ran structured discovery with borrowers and internal teams, translating pain points across working capital, term loans and trade finance into tailored product structures.
- Authored Credit Appraisal Memorandums (CAMs) — the banking equivalent of PRDs — for portfolios worth 500 Cr+, defining business rules, risk parameters and approval criteria.
- Managed user stories, acceptance criteria and product backlog in Jira, participating in Agile ceremonies to clarify requirements and track delivery to release.
- Derived monthly pricing off internally generated FTP, targeting a minimum 1% NIM per relationship while balancing concessions against cost of funds.
- Aligned stakeholders across credit, risk, legal, treasury, operations and compliance, resolving dependencies and driving decisions to closure.
- Built early-warning monitoring frameworks defining the trigger rules, thresholds and alert conditions applied across the post-disbursement portfolio.

AI Product Evaluator & Domain Expert | Pareto.AI (Project-based)

Dec 2025 - Present

- Defined evaluation criteria and acceptance benchmarks (evals) for LLM outputs across financial modelling, document generation and presentation workflows.
- Improved model output quality through structured testing and iterative prompt engineering, measured against expert-defined benchmarks.
- Applied domain expertise to close the gap between raw model capability and real-world finance workflows.

Product Portfolio Manager | HDFC Bank Limited

Jan 2020 - Apr 2022

- Built Power BI and Excel analytics for a 200 Cr+ portfolio, defining the metrics, dimensions and data elements behind default probability and portfolio health views.
- Designed data-driven decisioning and early-warning logic, defining the trigger conditions and thresholds that reduced portfolio stress.
- Created sector-specific credit and financial models, standardising underwriting inputs and scoring logic across borrower segments.
- Presented portfolio health and risk MIS to senior management, supporting real-time decisions on exposure and remediation.
- Participated in Agile ceremonies with analytics and technology teams, contributing business requirements and reviewing delivery against portfolio reporting needs.

Operations Manager | Suraksha Asset Reconstruction Ltd.

Sep 2017 - Jan 2020

- Analysed financial health and recovery potential of NPA accounts offered for sale by banks, assessing risk and resolution feasibility.
- Supported acquisition of a stressed account with ~9,000 Cr debt under IBC, coordinating requirements across bank officials, legal counsel and management.
- Conducted due diligence and loan documentation for cases exceeding 50 Cr, ensuring regulatory and internal policy compliance.

Consultant | Tata Trusts

May 2017 - Sep 2017

- Deployed field operations across Maharashtra, establishing a network of extension officers (BRCs and CRCs) to accelerate MIS data entry across districts.
- Shifted the region from last to 9th position in IHHL count within 2 months by restructuring reporting cadence and field follow-up.
- Initiated a Rotary Club partnership to build handwash stations across 1,200 government schools, negotiating scope and delivery with external stakeholders.

Research Consultant | Dexter Consultancy

May 2016 - Jun 2016

- Conducted primary research across ~100 potential customers in 3 segments for an electric bike project, generating the insights that drove final design selection.
- Assessed online trading viability across ~25 retail stores, informing channel strategy and go-to-market approach.
- Analysed feasibility of 2 projects across Pune, resulting in selection of 1 for execution based on structured viability assessment.

PROJECTS

AI-Powered Credit Intelligence Platform ([GitHub Link](#))

- Identified the problem — CAM prep consuming 4-6 hrs per borrower — then scoped the MVP, defined the backlog and mapped user journeys for RM and analyst personas.
- Owned delivery end-to-end: requirements, LLM prompt design, UI/UX and output validation against real CAMs; shipped with Excel & PDF exports, cutting prep to under 1 hr.

Tech Stack: Python, FastAPI, Next.js 16, Supabase, Google Gemini API, Claude API, SQLite, OpenPyXL, PDFMiner, GitHub

AI Persona Interaction Platform ([Deployed Link](#))

- Launched a live B2C AI product with 350+ personas, defining product strategy, prompt standards, monetisation model (freemium + Razorpay) and go-to-market.
- Ran iterative delivery cycles: prioritised the backlog, wrote user stories and acceptance criteria, and shipped incremental releases against engagement and retention KPIs.

Tech Stack: Next.js, Supabase, Gemini 1.5 Flash, Groq Llama 3.3 70B, Vercel, Google OAuth, Tailwind CSS, Mixpanel

Automated Multi-Portal Job Discovery ([GitHub Link](#))

- Defined requirements and the end-to-end journey for an AI-driven matching tool — preference configuration, relevance scoring (0-100) and a daily digest.
- Iterated the scoring model through live use and shipped a web dashboard; surfaces ~10 matched roles across 5+ portals with zero manual intervention.

Tech Stack: Python, Flask, Ollama/Mistral, Selenium, SQLite, APScheduler, Telegram Bot API, BeautifulSoup

EDUCATION

PGPM (MBA Equivalent) — IIM Sirmaur

Aug 2015 - Apr 2017

B.E. - Electronics & Telecommunication — University of Pune

Aug 2010 - Apr 2014
